

Carrier Group (Ocean / Naval / Fleet Warfare)

Executive Summary

Carrier Group is a comprehensive naval simulation built for the realistic warfare, combat and operations, autonomous maritime coordination, and multi-domain combat across sea, air, and hyperspace missile environments. The environment features open ocean expanse, shifting wave patterns, carrier decks, destroyer screens, submarine lanes, missile arcs, radar systems, and tactical plots. The main missionline (Objective) focuses on autonomous coordination, sensor fusion under sea clutter and radar interference, control-room warfare, and tactics across a vast, mobile battlespace. In All Naval (Allied) the main objective is to "S-C" in greater distance, covers a 10x10 in physical area representing "1/4" of ocean terrain, the features include carrier or sensor, destroyer screens, submarine shadow lanes, and base room missile drills.

Design Goals & Gameplay

Realistic Naval Warfare

Carrier Group prioritizes sophisticated fleet: carriers, destroyers, cruisers, submarines, drones, and aircraft. Engagements occur across massive distances.

Carrier Air Wing Operations

Fuelers, tankers, VTOLs, and escort drones launch from carrier decks. Air superiority determines strike capability and fleet survival.

Destroyer Screens & Missile Defense

Destroyers and escort fleet launch defense efforts using AA guns, CIWS, missile interceptors, and EW systems.

Submarine Shadow Zones

Submarines exploit deep water lanes, thermal layers, and carrier shadows to ambush surface ships or disrupt logistics.

Autonomous Maritime Routing

Autonomous route planning adapts based on wave patterns, radar clarity, sensor returns, missile arcs, and threat vectors.

Sensor & Information Warfare

Radar clutter, jamming, thermal flares, jamming, and EW interference degrade sensors. Navy ships restore clarity. Destroying ships create blind patches across the ocean.

Logistics & Resupply

Fuel ships, supply vessels, and repair barges serve as mission lifelines. Protecting logistics ships is critical for sustained operations.

Deployment & Progress

A fleet commander tracks 15,000 points/force players to choose between air dominance, missile supremacy, submarine control, or balanced fleet composition. Real displays from the southeast carrier strike group, real displays from the northeast carrier strike group.

Spatial Constraints (Nreal AR)

Scene Capabilities
Near light ray "1.5" diagonal FOV, 1000-1000 per eye resolution. Optimal viewing distance "8-15 m.

Playable Area & Scaling

10x10 m physical area x 1 km² ocean zone (1:100 scale). Designed for tabletop AR.

Tracking & Occlusion

Inside-out tracking delivers horizontal planes. Depth-mesh (if available) provides limited occlusion. Virtual objects render over real-world scene, assume minimal real-world occlusion.

Layout Overview

Coordinate System

1000x1000 grid (1 unit = 1 m). Origin (0,0) is southeast corner.

Key Locations

Blue HQ Carrier Strike Group → (0,0). 100x100 m Carrier deck, destroyer screens, drone pads, ballistic shields.

Red HQ Carrier Strike Group → (1000,1000). 100x100 m Carrier deck, radar radar, AA interceptors, missile batteries.

Carrier Battle Control Room → (500,500). 50x50 m Control console, wave patterns, missile arcs, AI-sea measurements.

Carrier Base Control → (250,250). 100x100 m Fuel ships, repair barge, sensor support console.

Base Room Core → (500,500). 100x100 m Near-sensor radar radar, EW radar, air control console.

Missile Control → (0,0). 100x100 m Primary base room missile base, communication console and EW track.

Submarine Shadow Room → (1000,0). 100x100 m Low sensor radar radar, sensor radar, sensor radar.

Base Area → (500,500). 100x100 m Low sensor radar radar, sensor radar, sensor radar.
